

# C# Web - Razor Pages - Oefening

PRO - C# Web 1

### DE HOGESCHOOL MET HET NETWERK

Hogeschool PXL – Elfde-Liniestraat 24 – B-3500 Hasselt www.pxl.be - www.pxl.be/facebook

# Doel

- ASP.Net Core toepassing
  - Razor Web Application
    - Oefening 01 Locations
    - SelectList
    - Add Location
    - Oefening 02 Add Klant
    - Oefening 03 SelectList

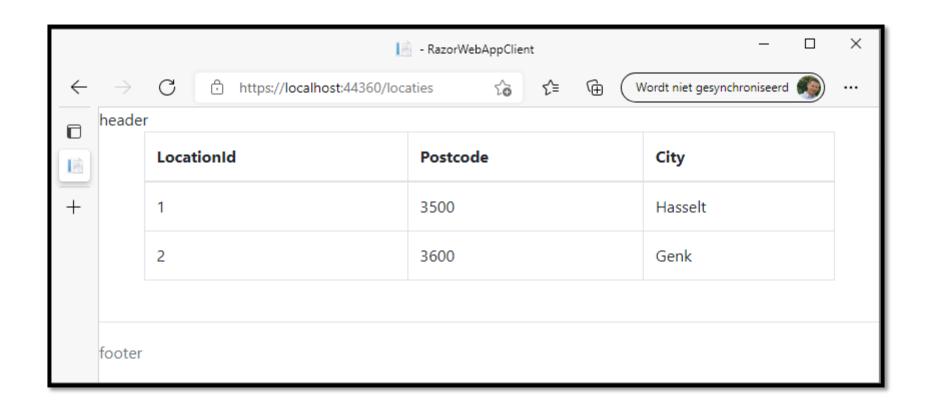

# **ASP.NET CORE**

**Razor Web Application – Oefening01** 

- Project instellingen
  - Add class
    - Location.cs
      - LocationID
      - Postcode
      - City
    - Databank.cs
      - Voeg 2 records toe
        - 1-3500-Hasselt
        - 2-3600-Genk
  - Add razor Page
    - Locaties.cshtml
      - Toon een Tabel met de gegevens van de locaties uit de databank class.
  - Voeg een hyperlink toe in de Index razor page naar de nieuwe pagina

```
public class Location
{
    public Location()
        LocationId = -1;
        PostCode = string.Empty;
        City = string.Empty;
    public Location(int locationId, string postCode, string city)
        LocationId = locationId;
        PostCode = postCode;
        City = city;
    public int LocationId { get; set; }
    public string PostCode { get; set; }
    public string City { get; set; }
```

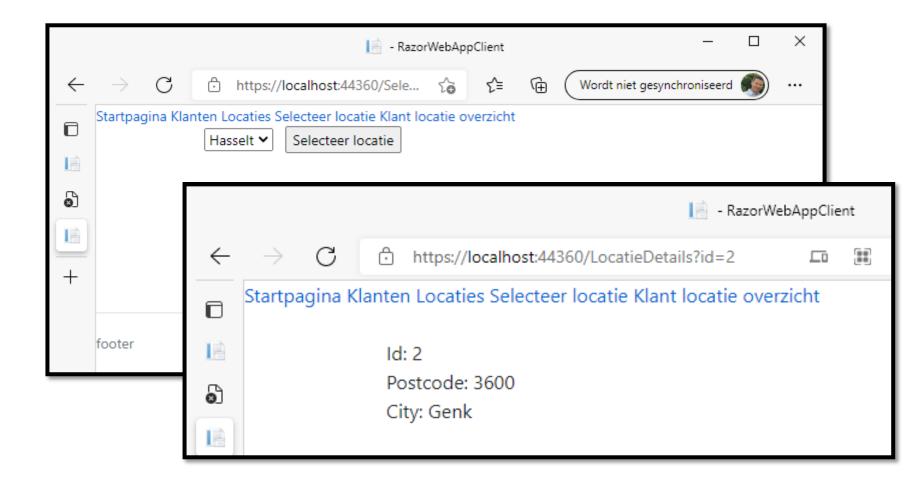

```
public class Databank
{
   public static List<Klant> Klanten = new List<Klant>();
   public static List<Location> Locations = new List<Location>();

public static void StartDatabank()
   {
      Klanten.Add(new Klant(1, "Klant A"));
      Klanten.Add(new Klant(2, "Klant B"));
      //Locations
      Locations.Add(new Location(1, "3500", "Hasselt"));
      Locations.Add(new Location(2, "3600", "Genk"));
   }
}
```

Hyperlink naar de razor pagina's in de layout page

Add Razor page SelecteerLocatie.cshtml

- SelecteerLocatie.cshtml
- LocatieDetails.cshtml

SelecteerLocatie.cshtml

```
@page
@model RazorWebAppClient.Pages.SelecteerLocatieModel
@{
    var locaties = Data.Databank.Locations;
    var list = locaties.Select(x => new SelectListItem
            Text = x.City,
            Value = x.LocationId.ToString()
        });
<div>
    <form method="post">
        <select name="SelectLocatie" asp-items="@list"></select>
        <label>&nbsp;</label>
        <input type="submit" value="Selecteer locatie" class="submit" />
    </form>
</div>
```

#### SelecteerLocatie.cshtml

• OnPost() in codebehind page

```
namespace RazorWebAppClient.Pages
    public class SelecteerLocatieModel : PageModel
        public void OnGet()
        public IActionResult OnPost()
    var locId= Request.Form["SelectLocatie"].FirstOrDefault();
           return RedirectToPage("LocatieDetails",
               new { id = int.Parse(locId) });
```

LocatieDetails.cshtml

```
@page
@model RazorWebAppClient.Pages.LocatieDetailsModel
@{
    var id = Model.LocationId;
    var locatieRecord = Data.Databank.Locations.Where(x =>
x.LocationId == id).FirstOrDefault();
    var postCode = locatieRecord.PostCode;
    var city = locatieRecord.City;
<div>
    <br />
    Id: @id
    <br />
    Postcode: @postCode
    <br />
    City: @city
</div>
```

#### LocatieDetails.cshtml

OnGet() in codebehind page

```
namespace RazorWebAppClient.Pages
{
    public class LocatieDetailsModel : PageModel
    {
        public int LocationId { get; set; }
        public void OnGet(int id)
        {
            LocationId = id;
        }
    }
}
```

- NieuweLocatie.cshtml
- Hyperlink naar de nieuwe pagina in Locaties.cshtml

<a asp-page="NieuweLocatie">Nieuwe locatie</a>

```
<form method="post">
   <fieldset>
        <legend>Locatie toevoegen</legend>
        <div>
            <label for="PostCode">Postcode:</label>
            <input type="text" name="PostCode" />
            <br />
            <label for="PostCode">City:</label>
            <input type="text" name="City" />
            <br />
            <div>
                <label>&nbsp;</label>
                <input type="submit" value="Submit" class="submit" />
            </div>
        </div>
</fieldset>
</form>
```

#### Databank klasse uitbreiden

- Functie AddLocation(string postCode, string city) toevoegen
- Gebruik van Linq voor berekening van nieuwe Id

```
public static void AddLocation(string postCode, string city)
{
   int id = Locations.Max(x => x.LocationId) + 1;
   Locations.Add(new Location(id, postCode, city));
}
```

Post methode in de code-behind pagina

NieuweLocatie.cshtml.cs

```
public class NieuweLocatieModel : PageModel
{
    public IActionResult OnPost()
    {
        string postCode = Request.Form["PostCode"];
        string city = Request.Form["City"];
        Data.Databank.AddLocation(postCode, city);
        return RedirectToPage("Locaties");
    }
}
```

## **ASP.NET CORE**
